READER

*SpinFire Protect gives organizations a powerful tool to easily secure and distribute .3D files, as well as other file formats and provides an easy way to control how, when and by whom files are used*

## Key SpinFire Protect Features

### Protect

Strong encryption allows .3D files and all other sensitive information documents to be safely accessed and distributed within your organization and with outside parties with user-friendly encryption (AES 256 bit, SSF08 for PRC).

### Track

With SpinFire Protect all documents are tracked and have audit trails, making it easy to see who has accessed and edited any secured file. Permissions and keys are stored on a separate sever while the original file remains in your network, making it easy to locate and access files.

### Control

SpinFire Protect provides strong and flexible permissions that can be assigned to a single user or group of users. Allow users to only view documents, protecting against screen capture programs and unauthorized printing, or provide users with control over permissions, even setting an expiration date and time for access to a document.

### Accelerate

SpinFire Protect compresses all files before encryption allowing the swift transfer of files from author to reader.
